RED MEANS STOP!

Pedestrian Hybrid Beacons save lives - but only if drivers stop on red.

Hybrid beacons remain DARK until a pedestrian presses the button.

After pedestrians press the button, approaching drivers see a FLASHING YELLOW beacon.

A few seconds later, drivers see a SOLID YELLOW beacon. Motorists should slow down and prepare to stop.

The solid yellow beacons then change to SOLID RED. Drivers must stop.

NEXT, RED BEACONS BEGIN FLASHING. Once pedestrians have finished crossing the street, motorists can proceed.
